

Aqua-Piccolo moisture meters are a smaller and less expensive alternative to the Aqua-Boy for measuring the moisture content of leather.

If the special electrodes available for the Aqua-Boy are not needed. The Aqua-Piccolo is small enough to be easily carried in a pocket.

The needle electrodes are part of the meter. For the protection of the user the needles are covered by a guard that is automatically withdrawn when the needles are pressed in to the material to be measured.

The meter and electrodes are housed in a sturdy novodur housing. The single control button is located to allow operation with either the right or left hand.

Operating Instructions

The measuring electrode is incorporated in the upper part of the moisture meter. To avoid injuries, the electrode needles are recessed and emerge only when the electrode is pressed upon the material to be measured. With the electrode in contact with the material to be measured, depress the button and read the moisture percentage directly on the meter scale. Release the measuring button to end the measurement.

If, with the measuring button depressed, the red corner of the dial lights up, the battery must be replaced.

Compatibility. Suitable for leather moisture measurement.

Supplier	Aqua-Boy
Meter Type	Moisture Meter
Built In Scale	8%~40%
Additional Scales	none
Products Measured	Leather
Product Uses	Agricultural Products, Leather
Accuracy	0.5%
Reproducibility	No
Operation	Press the measuring button and immediately read the moisture percentage on the meter scale.
Display	Analogue
Guarantee	2, Years
Power Source	1 x 9v Battery
Power Type	Batteries
Width	68mm
Height	34mm
Length	120mm
Notes	Integral Electrodes
Application Industry	Textiles and Leather
Sub Group	Leather
Measuring Range	No
